

Materials	Temp. Range
Glass filled Nylon	-240°C to 121°C
Bronze filled PTFE	-260°C to 260°C
Glass filled PTFE	-260°C to 260°C
Carbon Graphite filled PTFE	-260°C to 260°C
Phenolic	-60°C to 130°C
PEEK	-70°C to 260°C

Product Description

The function of a wear ring is designed to help keep the piston centered, which allows for even wear and pressure distribution on the seals. Our standard wear ring materials are nylon and phenolic; additional material options are available upon request. Wear rings are used in both piston and rod applications. We carry wear rings in three different cut styles including butt cut, angle cut and step cut.

Style	Advantages	Installation	Performance
 <p>Butt Cut</p>	Easiest cut style to install in many applications.	 <p>Easy More Complex</p>	 <p>Good Best</p>
 <p>Angle Cut</p>	Improves bearing stress at the gap.	 <p>Easy More Complex</p>	 <p>Good Best</p>
 <p>Step Cut</p>	Improves bearing stress at gap. Better resistance to contaminants & spike loads.	 <p>Easy More Complex</p>	 <p>Good Best</p>
