# Technical Data Sheet Cylinlock ${ }^{\circledR} 844$ 

## Product Description

Hernon ${ }^{\circledR}$ Cylinlock ${ }^{\circledR} 844$ is a fast curing, high strength anaerobic adhesive designed to retain and seal cylindrical assemblies. This compound will cure on metallic or non-metallic substrates and is suitable for exposure to most solvents and withstands temperatures of $300^{\circ} \mathrm{F}\left(149^{\circ} \mathrm{C}\right)$. Augments or replaces press fits, set screws, pins and other mechanical retaining methods.

## Typical Applications

- Holding gears and sprockets onto gearbox shafts
- Holding rotors on electric motor shafts

## Typical Properties (Uncured)

| Property | Value |
| :--- | :--- |
| Resin | Dimethacrylate ester |
| Appearance | Green fluorescent liquid |
| Viscosity @ $25^{\circ} \mathrm{C}, \mathrm{cP}$ | 500 |
| Specific gravity | 1.09 |
| Flash point | See MSDS |

## Typical Properties (Cured)

| Property | Value |
| :--- | :---: |
| Coefficient of thermal expansion, <br> ASTM D696, $\mathrm{K}^{1}$ | $80 \times 10^{-6}$ |
| Coefficient of thermal conductivity, <br> ASTM C177, $\mathrm{W} / \mathrm{m}^{\mathrm{K}} \mathrm{K}$ | 0.1 |
| Specific Heat, $\mathrm{kJ} /(\mathrm{kg} \cdot \mathrm{K})$ | 0.3 |

## Typical Curing Performance

## Cure Speed vs. Substrate

The rate of cure will depend on the substrate used. The graph below shows shear strength developed with time on steel pins and collars compared to different materials and tested according to ISO 10123.

## Cure Speed vs. Bond Gap

The rate of cure will depend on the bondline gap. The following graph shows shear strength developed with time on steel pins and collars at different controlled gaps and tested according to ISO 10123.

## Cure Speed vs. Temperature

The rate of cure will depend on the ambient temperature. The graph shows the shear strength developed with time at different temperatures on steel pins and collars and tested according to ISO 10123.

# Hernon Technical Data Sheet 

## Cure Speed vs. Primer

Where cure speed is unacceptably long, or large gaps are present, applying primer to the surface will improve cure speed. The graph below shows shear strength developed with time using Hernon ${ }^{\circledR}$ EF $^{\circledR}$ Primer 49 and 50 on Zinc Dichromate steel pins and collars and tested according to ISO 10123.

## Typical Cured Performance

Shear Strength, ISO 10123
Steel Pins and Collars

| Cure Conditions | Shear Strength, <br> $\mathbf{N} / \mathbf{m m}^{2}(\mathbf{p s i})$ |
| :--- | :---: |
| 15 minutes at $22^{\circ} \mathrm{C}$ | $\geq 13.8$ |
|  | $(\geq 2000)$ |
| 24 hours at $22^{\circ} \mathrm{C}$ | $\geq 24.8$ |
|  | $(\geq 3600)$ |

## Typical Environmental Resistance

Cured for 1 week @ 22o․
Shear Strength, ISO 10123
Steel Pins and Collars

## Hot Strength

Tested at temperature

## Heat Aging

Aged at temperature indicated - Tested at $\left(22^{\circ} \mathrm{C}\right)$.

Chemical/Solvent Resistance
Aged under condition indicated - Tested at $72^{\circ} \mathrm{F}\left(22^{\circ} \mathrm{C}\right)$.

| Chemical/Solvent | Temp | \% of Initial Strength |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | (으) | $\mathbf{1 0 0} \mathbf{~ h}$ | $\mathbf{5 0 0} \mathbf{~ h}$ | $\mathbf{1 0 0 0} \mathbf{~ h}$ |
|  | 87 | 100 | 90 | 75 |
| Brake fluid | 22 | 100 | 100 | 100 |
| Ethanol | 22 | 100 | 100 | 100 |
| Unleaded Gasoline | 22 | 100 | 100 | 100 |
| Motor Oil | 125 | 100 | 100 | 100 |
| Acetone | 22 | 100 | 100 | 100 |

## General Information

This product is not recommended for use in pure oxygen and/or oxygen rich systems and should not be selected as a sealant for chlorine or other strong oxidizing materials.

For safe handling information on this product, consult the Material Safety Data Sheet (MSDS).

Where aqueous washing systems are used to clean the surfaces before bonding, it is important to check for compatibility of the washing solution with the adhesive. In some cases these aqueous washes can affect the cue and performance of the adhesive.

This product is not normally recommended for use on plastics (particularly thermoplastic materials where stress cracking of the plastic could result). It is recommended to confirm compatibility of the product with such substrates.

## Directions For Use

For best results, clean all surfaces (external and internal) with a Hernon ${ }^{\circledR}$ cleaning solvent and allow to dry. If the material is an inactive metal or the cure speed is to slow, apply $\mathbf{E F}^{\circledR}$ Primer 49 or 50 and allow to dry.
For Slip Fitted Assemblies, apply adhesive around the leading edge of the pin and the inside of the collar and use a rotating motion during assembly to ensure good coverage.
For Press Fitted Assemblies, apply adhesive thoroughly to both bond surfaces and assemble at high press on rates.
For Shrink Fitted Assemblies the adhesive should be coated onto the pin, the collar should then be heated to create sufficient clearance for free assembly.
Parts should not be disturbed until sufficient handling strength is achieved.

## Disassembly and Cleanup

To aid in disassembly anaerobic compounds can be weakened by heating to at least $500^{\circ} \mathrm{F}\left(260^{\circ} \mathrm{C}\right)$. Once disassembled, cured adhesive can be removed with Hernon ${ }^{\circledR}$ Gasket Remover 30.

## Storage

Cylinlock ${ }^{\circledR} 844$ should be stored in a cool, dry location in unopened containers at a temperature between $46^{\circ} \mathrm{F}$ to $82^{\circ} \mathrm{F}\left(8^{\circ} \mathrm{C}\right.$ to $28^{\circ} \mathrm{C}$ ) unless otherwise labeled. Optimal storage is at the lower half of this temperature range. To prevent contamination of unused material, do not return any material to its original container.

## Dispensing Equipment

Hernon ${ }^{\circledR}$ offers a complete line of semi and fully automated dispensing equipment. Contact Hernon ${ }^{\circledR}$ Sales for additional information.
