

Broussard Location - Now OPEN!

Growing Our Business to Serve You Better!

Hi-Tech Seals is proud to announce the opening of our newest branch in Broussard, LA. The new facility is our second United States location and serves as a sales and distribution center for the surrounding region. The over 4000 sq. ft. facility stocks a broad range of standard, custom, and oilfield specific seals and seal related products, including:

- O-Rings
- Gaskets
- Rod Piston Seals
- Rotary & Shaft Seals
- Wireline Valve Seals
- Hydraulic & Pneumatic Seals
- Metal & Wear Components
- Custom Moulded Products

We are excited to have Gordon Ritchie lead the new facility as our Branch Manager. Gordon brings over 20 years of valuable industry experience to our team. Since joining the Hi-Tech Seals Technical Sales team nearly 4 years ago, Gordon has remotely represented the Hi-Tech Seals business in the region. He brings an exceptional understanding of our customers' needs, end uses, and application requirements.

About Us

For 30 years Hi-Tech Seals has been distributing and manufacturing precision industrial seals, gaskets, and elastomer / thermoplastic components. We collaborate with customers to provide them superior sealing solutions for their unique requirements.

We support our customers with the manufacture of components through our elastomer and thermoplastic machining, gasket manufacturing, cast urethane production, and splice and vulcanizing departments. Having these capabilities at our disposal allows for quick turnaround of production parts. If a prototype is required, our experienced engineering, drafting, and machining staff can design and manufacture the prototype without expensive tooling charges.

We also offer our customers an array of services to enhance their experience with us. Our engineering Seal Analysis Lab will perform a wide variety of critical tests and analyses of elastomers, thermoplastics, and metals. Our kit creation program provides customers with an easy to use reordering system for various types of seal kits. Laser engraving key information on components for customers allows for easy part identification, reordering process, and increased brand exposure.
