

Engineered Composite Structures

- Corrosion resistant
- High temperature
- Near net shape
- Fatigue resistant
- High strength
- Lightweight

Automated Dynamics' high-performance composite parts replace metal in aggressive, extreme environments.

We manufacture and design composites in a wide variety of shapes and sizes, including cylinders, cones, box beams, T's, I-beams, triangles, coils, flat laminates, ovals and complex geometries up to 40 feet long with ODs from 0.020 inches to 60 inches.

We offer full engineering, proof of concept, material selection, development, prototyping, initial order and full production capabilities.

Over twenty years of proven experience and state-of-the-art technology.
