

Laser Engraving

For Quick and Easy to Read part Identification

More and more companies are looking to have specific information or identifying marks on their parts. These marks help with traceability, product identification, branding, and simplify the re-ordering process.

Our laser engraving machine allows customers to engrave their company name, part number, application information, logo, and other important identifiers onto parts. It is capable of engraving most plastic, rubber, and metal materials.

The focused laser beam etches damage-free and easy-to-read marks along a surface as small as 1/8" tall.

Laser engraving advantages:

- Improve the re-ordering process for staff and customers
- Assists with product traceability
- Capable of engraving on flat and round surfaces without distorting the text
- Increases brand exposure
- Locks in proprietary part ordering
